Stress - strain curve (XY)²

ASTM D638: Stress-Strain Curve at Room Temperature (23°C/73°F) Type I vs V

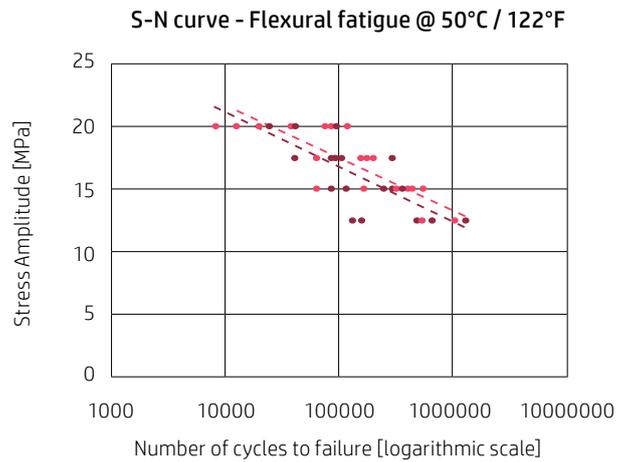

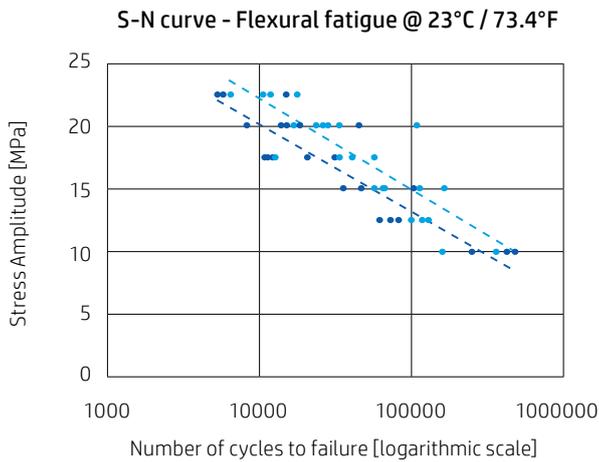

Flexural fatigue

Flexural fatigue tested according to ASTM D7774 using a 3-point bending support with 60 mm span. Specimens of 127 x 12.7 x 3.2 mm were cycled applying a sinusoidal signal with a determined positive and negative load as peaks. This signal was applied at a frequency of 1.5 Hz until the specimen fails:

For each orientation, the number of cycles to failure, in logarithmic axis, has been plotted in function of the signal's stress amplitude:

● ZX, ZY -23°C ● XY, XZ, YX, YZ -23°C --- Log. (ZX, ZY -23°C) --- Log. (XY, XZ, YX, YZ -23°C) ● ZX, ZY -50°C ● XY, XZ, YX, YZ -50°C --- Log. (ZX, ZY -50°C) --- Log. (XY, XZ, YX, YZ -50°C)

Using the trendline for each orientation, an average amplitude value is obtained to failure at some specific number of cycles:

	Stress Amplitude [MPa]			
	23°C / 73.4°F		50°C / 122°F	
Cycles	XY. XZ. YX. YZ	ZX. ZY	XY. XZ. YX. YZ	ZX. ZY
5000	± 22.5	± 24.7	± 22.5	± 22.9
10000	± 20.6	± 22.7	± 21.2	± 21.6
50000	± 16.1	± 18.0	± 18.1	± 18.8
100000	± 14.1	± 15.9	± 16.8	± 17.5
500000	± 9.6	± 11.2	± 13.8	± 14.6
1000000	± 7.7	± 9.2	± 12.5	± 13.4

Influence of temperature on Mechanical Properties²

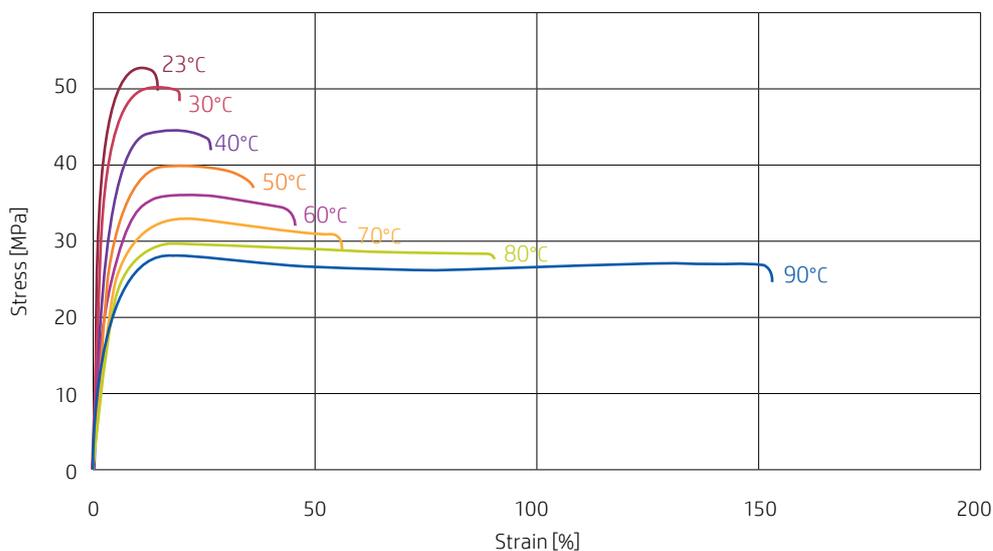

This test has been done by exposing type I specimens at different temperatures for 3 hours in an environmental chamber. A group of type I tensile bars has been exposed to each of the temperatures. The results displayed are the average values of the specimens tested.

Stress-strain curves at different temperatures

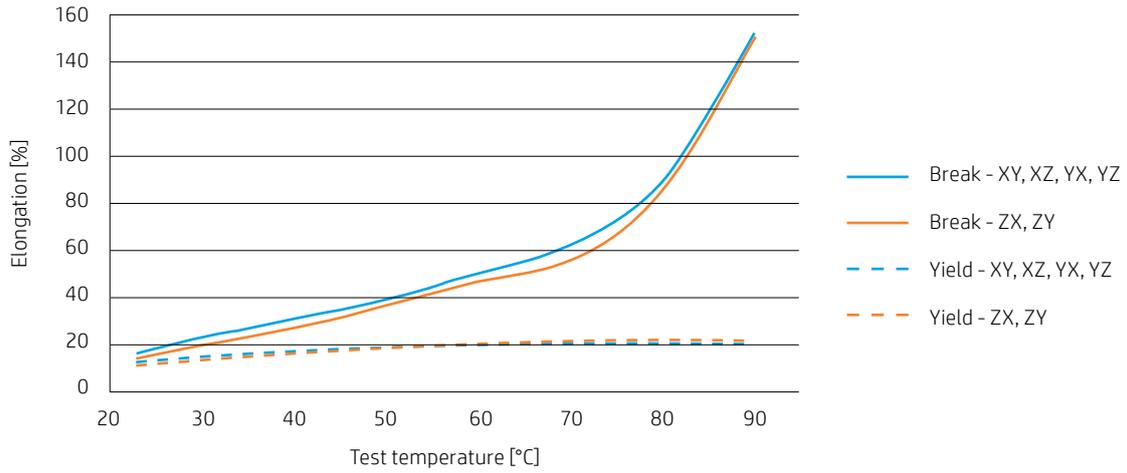

XY, XZ, YX, YZ orientations:

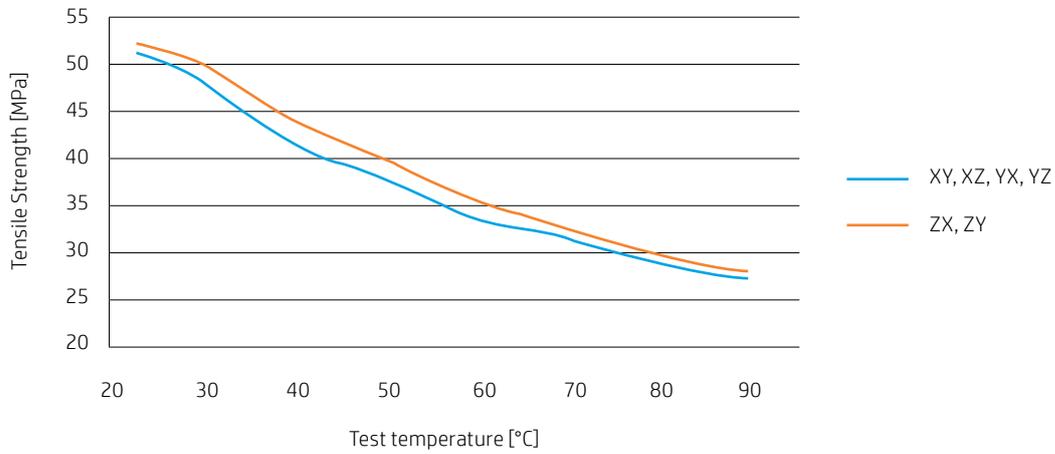

ZX, ZY orientations:

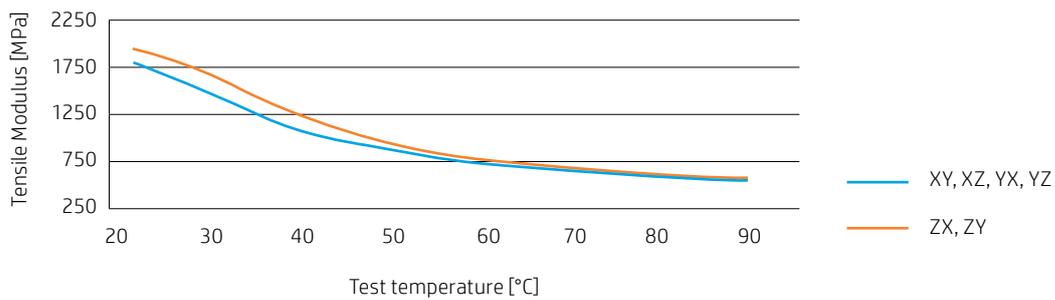

Elongation at Yield and Elongation at Break at different temperatures

Tensile strength at different temperatures

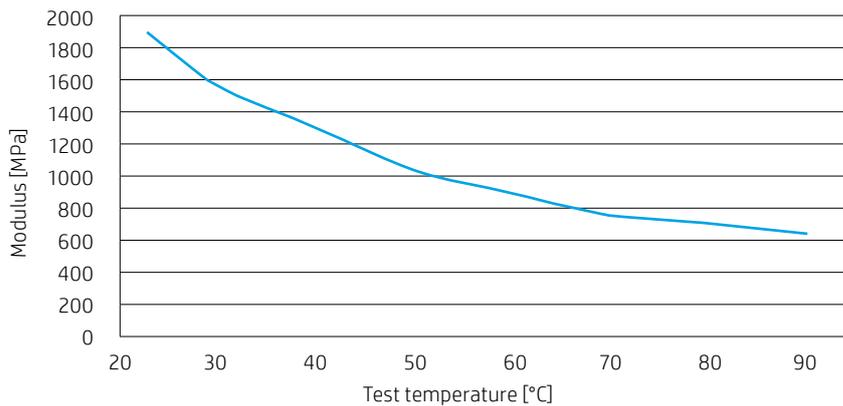

Tensile modulus at different temperatures

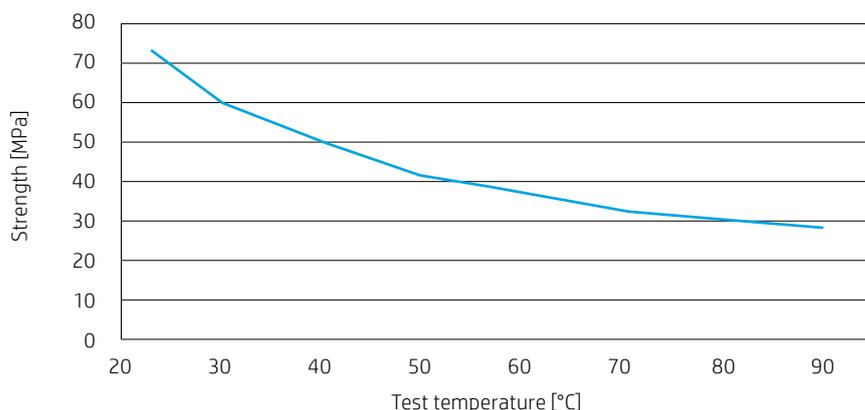

Flexural properties at different temperatures

Flexural Modulus at different temperatures. All orientations

Flexural strength @5% at different temperatures. All orientations

Coefficient of Linear Thermal Expansion (Test Method ASTM E831)

Coefficient thermal expansion [$\mu\text{m}/(\text{m } ^\circ\text{C})$]		
Orientation	Measurement zone	
XY, XZ, YX, YZ	Below Tg	135
	Above Tg	185
ZX, ZY	Below Tg	110
	Above Tg	150

Tg temperature: 50°C / 122°F

Dynamic security enabled printer. Only intended to be used with cartridges using an HP original chip. Cartridges using a non-HP chip may not work, and those that work today may not work in the future. More at: hp.com/go/learnaboutsupplies.

For more information, please visit
hp.com/go/3DMaterials

1. Results obtained with a DSC at 10°C/min or 50°F/min.
2. The following technical information should be considered representative of averages or typical values and should not be used for specification purposes. These values are with FW TATDAG_15_18_11.69 and have been obtained from a sample of specimens printed in plots with 6% packing density. Minimum separation between specimens in the plot was 10 mm. Tensile and Flexural Modulus have been calculated using the slope of the regression line between 0.05% and 0.25% strain. Compression Modulus has been calculated using the slope of the regression line between 0.5% and 1% strain. In both cases the measurement was done with an automatic extensometer during the entire test. Cross-section dimension measures are done using a micrometer with round ends. Conditioning according to ASTM D618 Procedure A: 48 hours after printing and unpacking of the parts at 23°C / 73°F and 50% RH. Orientations defined according to ASTM F2971.
3. Tested following the ASTM D638 with a test rate of 50mm/min and 10 mm/min for type I and type V, respectively.
4. Tested following the ASTM D790 Procedure B at a test rate of 13.55 mm/min.
5. Tested according to ASTM D695 at a test rate of 1.3 mm/min. Specimens of Ø12,7mm x 25.4 mm for compression strength and Ø12.7 mm x 50.8 mm for compression modulus.
6. RoHS certification for EU, Bosnia-Herzegovina, China, India, Japan, Jordan, Korea, Serbia, Singapore, Turkey, Ukraine, Vietnam.
